DETAILED ACTION

Claims 1, 11 and 43-44 are pending in the application.

Claims 43-44 are directed toward the non-elected invention and are therefore withdrawn from consideration on the merits.

Claims 1 and 11 were examined on their merits.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cheng et al. (1998) or Cheng et al. (1998 – AR reference as cited in the IDS submitted on 4/11/05), Chou et al. (1999) or Gin et al. (1998) in view of Huo et al. (CN 1079150 A).

All of these references teach that Yu Ping Feng San which comprises Huangqi, Baizhu and Fang feng (*Astragalus membranaceus* Bge, *Attractylodes macrocephala* kodiz and *Ledebouriella seseloides*) in ratios including 1:1:1 were effective in treating allergic rhinitis (see English Abstracts).

None of the references specifically taught the incorporation of *Flos Magnoliae* (Magnolia flower) into the composition.

Huo et al. taught that magnolia flower was advantageous for use in treating rhinitis (see English Abstract).

It would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to combine the instant ingredients for their known benefit since each is well known in the art for treating allergic rhinitis. This rejection is based on the well established proposition of patent law that no invention resides in combining old ingredients of known properties where the results obtained thereby are no more than the additive effect of the ingredients, *In re Sussman*, 1943 C.D. 518. Accordingly, the instant claims, in the range of proportions where no unexpected results are observed, would have been obvious to one of ordinary skill having the above cited references before him.

Although the reference did not specifically state that the *Magnolia liliflora* was present in the composition in the amounts as specifically claimed, it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 220 F2d 454, 456, 105 USPQ 233, 235 (CCPA 1955). see MPEP § 2144.05 part II A. It would have been obvious to one of ordinary skill in the art at the time Applicants' invention was made to determine all operable and optimal concentrations of components because concentration is an art-recognized result-effective variable which would have been routinely determined and optimized in the pharmaceutical art.

From the teachings of the references, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole was *prima facie* obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the references, especially in the absence of evidence to the contrary.

No Claims are allowed.
